

## AGENTS IN MIMIS

### How it works

#### A. Business/company side

1. A business creates account and profile.
2. A business should be able to create new user account for agent or add existing agent account to their business.

The sketch shows a rectangular box representing a user interface. At the top left, it is labeled 'Company X'. In the center, the title 'Add user/Agent' is written. Below this title, there are two main sections: 'New' and 'Existing'. The 'New' section contains four input fields labeled 'Fullname', 'Email', 'Username', and 'Password', each followed by a horizontal line for text entry. Below these fields is an oval button labeled 'add'. The 'Existing' section contains the word 'Search' above a rectangular input field labeled 'Enter email'. Below this field is another oval button labeled 'Add'.

3. An agent/user get to be notified when added to a new business. An agent/user should confirm before they are able to apply for permit.
4. A business should be able to remove user agent from their businesses (when an agent's user account is removed, Agent will no longer be able to apply for permit)

#### B. Agent side

1. An agent signs into their account
2. An agent should be able to see all assigned businesses to their account.

The sketch shows a rectangular box representing a user interface. At the top left, the title 'Switch businesses' is written. Below it is a dropdown menu with 'Company X' selected and a downward-pointing triangle icon. Below the dropdown, there is a list of three items: '- Company Y', '- Business Z', and '- Company D'. In the top right corner, there is a circular icon containing a stylized 'A' and the text 'Agent X' below it.

3. An agent should be able to switch between different business and apply for permits.
